

# PROTECTING INFRASTRUCTURE

## Critical infrastructure applications

- Physical Security Assessments
- Computer Network Vulnerability Assessments

Director liability, regulatory requirements, technology convergence and security concerns have caused many companies to question their existing risk management position. Our Physical, Cyber, Control System / SCADA Risk Assessment Methodology has been recognized by several Australian and American government agencies and is regularly applied in the Oil and Gas and Maritime industries.

## Defendable process

- Framework customized for client
- Cross network / cross facility comparison
- Systematic approach

We provide a unique framework and the supporting skills set to manage risk, demonstrate good governance and develop a business case that provides clients with the ability to prioritize their expenditures and identify where security funds should be allocated in a defensible process.

## Network mapping

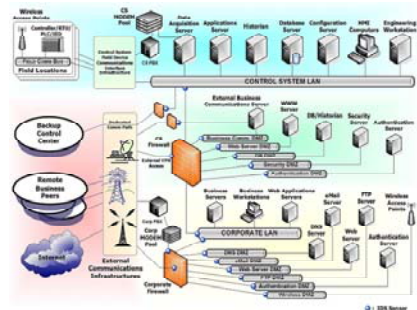

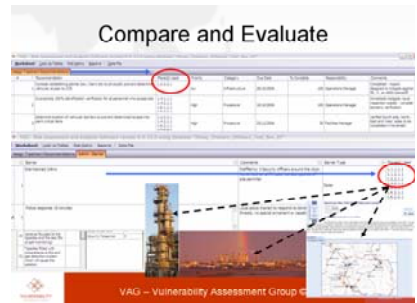

- Network architecture captured
- Interconnectedness identified

Mapping vulnerabilities from both a Physical and IT network perspective is essential for critical infrastructure operators due to interconnectedness; convergence; cyber attacks; activism; physical attacks and terrorism.

## Unique methodology

- Physical Security Risk Framework
- Control System / SCADA / Cyber Security Risk Framework
- Safety Risk Framework

Our methodology is supported by a unique proprietary framework, delivered through a secure software program, which incorporates the risk thresholds of our clients delivering a systematic assessment consistent with corporate risk policy.
